Health Experience Platform

ELITE CODERS

The Health Experience Platform is a web-based community-driven system where people can share and discover real health experiences anonymously. It bridges the gap between patients seeking relatable information and those who have recovered from similar health conditions, offering practical, experience-based insights rather than medical prescriptions.

1 Problem

Many individuals face minor but urgent health issues that don't always require a doctor's consultation. However, reliable and relatable solutions are often unavailable online, and users hesitate to discuss such problems publicly due to privacy concerns.

2 Key Features

- 100% Anonymity — no personal details required.
- Tag-based search for precise and quick results.
- Internal safe messaging system for user-to-user communication.
- Option for verified experiences to improve reliability.

3 Impact

- Promotes peer-to-peer health support and awareness.
- Builds a growing database of real, relatable health experiences.
- Encourages community-driven wellness and self-education.

4 Solution

Our platform provides an anonymous, structured, and interactive space where users can share their experience by submitting a structured form containing:

Disease Name, Symptoms (as tags), Recovery Time, Medications Used, Doctor Consultation (Yes/No), and a Personal Story.
